

## Show a map

This page needs to show a Highcharts Map of the USA and is provided a feed from an api via the views\_json\_source module.

I need the map to display in a custom block and only on this page

[.https://www.90daywakeupmybusiness.com/node/316](https://www.90daywakeupmybusiness.com/node/316)

This site uses the [https://www.drupal.org/project/charts\\_highcharts\\_maps](https://www.drupal.org/project/charts_highcharts_maps)

SEE THE SOURCE CODE HERE:

[https://git.drupalcode.org/project/charts\\_highcharts\\_maps](https://git.drupalcode.org/project/charts_highcharts_maps)

module to connect the Highcharts.com maps.js library to drupal via the Charts module.<https://www.drupal.org/project/charts>

and use this map as the base map to put the values on

<https://www.highcharts.com/demo/maps/us-counties>

The API for the data source is

<https://cdn.jsdelivr.net/gh/highcharts/highcharts@v6.2.0/samples/data/us-counties-unemployment.json>

Here is the map module creators drupal profile: <https://www.drupal.org/u/andileco>

and his Linkedin profile link. <https://www.linkedin.com/in/daniel-cothran-43878218/>

The main thing I am looking for is how to get the view data to flow into the map correctly so the tool tips display the data.

The other thing I am trying to discover is if the

[https://git.drupalcode.org/project/charts\\_highcharts\\_maps](https://git.drupalcode.org/project/charts_highcharts_maps) mapping module is even in a functional state as it is in Alpha state.

Here is a embedded jsfiddle of the map using a iframe. this is not what I want. just showing you the map that needs to work. Maybe if it is easier just directly code the js into drupal as a custom block so I can just edit the source url of the map TopoJSON

shape file and the source of the data api url. Then have it render the map. Ideas....
